Grade: C

# Projects

## Billion Trees Afforestation Project

<http://www.billiontreestsunami.gov.pk>

The Billion Tree Tsunami was launched in 2014, by the government of Khyber Pakhtunkhwa (KPK), Pakistan, as a response to the challenge of global warming. Pakistan's Billion Tree Tsunami restores 350,000 hectares of forests and degraded land to surpass its Bonn Challenge commitment. The project aimed at improving the ecosystems of classified forests, as well as privately owned waste and farm lands, and therefore entails working in close collaboration with concerned communities and stakeholders to ensure their meaningful participation through effectuating project promotion and extension services. The project was completed in August 2017, ahead of schedule.
