Polio Seroprevalence Survey-2022 (September 2022 to January 2023)

This was a community-based cross-sectional seroprevalence survey involving collection of dried blood specimens (DBS) among children aged 12–59 months (n = 401). Multi-stage cluster sampling using GIS was applied to select the study sample.

Collected DBS were analysed with microneutralization assays for poliovirus neutralizing antibody levels.
