MR. No: K0100003389931

Name: SADAM

Sex: Male

Age: 29 Years (As per record)

Dated: 2 November 2023

Hx: PR bleed with circumferential mass approximately 25cm from anal verge on colonoscopy

CT THORAX (with contrast)

- Atelectatic bands are seen in the middle lobe, lingula and basal segments of bilateral lower lobes.
- Normal vascular anatomy of the mediastinum with intact fat planes with the trachea
Soft tissue appears normal.
No evidence of bronchiectasis or pneumothorax.
No evidence of enlarged lymph nodes.
No mediastinal shift is noticed.
No pleural effusion on either side.

C.T ABDOMEN, PELVIS (With Contrast)

- Short segment circumferential thickening is seen involving the sigmoid colon extending for the length of approximately 6.5cm with maximum mural thickness of anterior wall of sigmoid colon of approximately 2.5cm. There is resultant upstream dilatation of large bowel with maximum caliber of cecum of approximately 10.5cm and transverse colon of approximately 7.8cm. It is abutting the left pelvic side wall peritoneum. Surrounding fat stranding is seen, however fat planes with surrounding bowel loops and urinary bladder are intact.
 - Minimal free fluid is seen in pelvis.
 - Few small sub centimeter lymph nodes are seen along the left common iliac vessels.
 - Small bowel appears normal.
- Liver, spleen and pancreas are normal without any focal lesion.
Both kidneys excrete the contrast medium normally.
Major vessels appear normal.
Urinary bladder appears normal.
No evidence of ascites.
No evidence of any bony pathology demonstrated.
For gall bladder pathology ultrasound is the modality of choice.

CONCLUSION

- Short segment circumferential thickening involving the sigmoid colon with upstream dilatation of large bowel & surrounding mild fat stranding ----- radiological features are suggestive of neoplastic etiology. Biopsy and further work up is advised.

Prepared by: Dr Ayesha Waheed (TMO-Radiology)

Specimen Received : 04-NOV-2023 11:36:55

Reported : 15-NOV-2023 15:59:49

Specimen Nature: LEFT HEMICOLECTOMY

Specimen Site: PART OF TRANSVERSE COLON, DESCENDING COLON AND SIGMOID COLON

History: Circumferential mass at about 25 cm from anal verge with friable mucosa, causing luminal obstruction.

Gross: Specimen container is labeled with the patient's name and medical record number and is unmarked for site.

Received in formalin is a left hemicolectomy specimen. The part of transverse colon measures 100 mm, descending colon measures 120 mm and sigmoid colon measures 175 mm in length. Grossly, no perforation or serosal exudates are identified. An area of serosal puckering is identified in the sigmoid colon. On opening the specimen, a circumferential tumor is identified in the sigmoid colon measuring 50 mm. This tumor is present at a distance of 65 mm from distal resection margin, 20 mm from proximal resection margin and 25 mm from mesenteric resection margin. Tumor corresponds to the site of serosal puckering. The segment of bowel proximal to tumor is dilated and mucosa is flattened. On serial slicing, grossly tumor is reaching upto the serosa. Multiple lymph nodes are identified in the mesenteric fat. The largest measures 19 x 15 x 10 mm. Representative sections are taken and submitted as follows:-
A) Proximal margin; B) Distal margin; C) Mesenteric margin; D-J) Full thickness sections of tumor with serosa inked black; K) Serially sliced largest lymph node; L) Single serially sliced lymph node; M-P) Single bisected lymph node in each block; Q) Multiple lymph nodes; R) 4 lymph nodes; S) 3 lymph nodes; T) 2 lymph nodes.

Micro: Procedure: LEFT HEMICOLECTOMY

Tumor Site: Sigmoid colon

Tumor Size: 50 mm

Macroscopic Evaluation of Mesorectum (required for rectal cancers): Not present

Macroscopic Tumor Perforation: Not seen

Histologic Type: Adenocarcinoma

Histologic Grade: Moderately differentiated

Tumor Extension: Into subserosal fat

"Margins (select all that apply):

Proximal Margin: Free

Distal Margin: Free

Treatment Effect: Not applicable

Lymphovascular Invasion: Not seen

Perineural Invasion: Not seen

Tumor Deposits: Not seen

Tumor corresponds to the site of serosal puckering. The segment of bowel proximal to tumor is dilated and mucosa is flattened. On serial slicing, grossly tumor is reaching upto the serosa. Multiple lymph nodes are identified in the mesenteric fat. The largest measures 19 x 15 x 10 mm. Representative sections are taken and submitted as follows:-
A) Proximal margin; B) Distal margin; C) Mesenteric margin; D-J) Full thickness sections of tumor with serosa inked black; K) Serially sliced largest lymph node; L) Single serially sliced lymph node; M-P) Single bisected lymph node in each block; Q) Multiple lymph nodes; R) 4 lymph nodes; S) 3 lymph nodes; T) 2 lymph nodes.

Micro: Procedure: LEFT HEMICOLECTOMY

Tumor Site: Sigmoid colon

Tumor Size: 50 mm

Macroscopic Evaluation of Mesorectum (required for rectal cancers): Not present

Macroscopic Tumor Perforation: Not seen

Histologic Type: Adenocarcinoma

Histologic Grade: Moderately differentiated

Tumor Extension: Into subserosal fat

"Margins (select all that apply):

Proximal Margin: Free

Distal Margin: Free

Treatment Effect: Not applicable

Lymphovascular Invasion: Not seen

Perineural Invasion: Not seen

Tumor Deposits: Not seen

Narcotics and Trafficking		<input checked="" type="checkbox"/>	Participation in an organized criminal group and racketeering		<input checked="" type="checkbox"/>	Sexual Exploitation, including Sexual Exploitation of Children		<input checked="" type="checkbox"/>
Corruption and Bribery		<input checked="" type="checkbox"/>	Human Trafficking / Migrant Smuggling or Trafficking in Person and Smuggling of Migrants		<input checked="" type="checkbox"/>	Illicit Trafficking in stolen and other goods		<input checked="" type="checkbox"/>
Smuggling in relation to Custom and Excise Duty and taxes		<input checked="" type="checkbox"/>	Illicit Arm Trafficking		<input checked="" type="checkbox"/>	Counterfeiting Currency		<input checked="" type="checkbox"/>
Tax Crime related to direct and indirect taxes		<input checked="" type="checkbox"/>	Fraud/Forgery / Cheating		<input checked="" type="checkbox"/>	Counterfeiting and Piracy of Products		<input checked="" type="checkbox"/>
Illegal MVTS/Hawala/Hundi		<input checked="" type="checkbox"/>	Kidnapping for ransom		<input checked="" type="checkbox"/>	Murder, Grievous Bodily Harm		<input checked="" type="checkbox"/>
Cash Smuggling		<input checked="" type="checkbox"/>	Robbery / theft		<input checked="" type="checkbox"/>	Environmental Crime		<input checked="" type="checkbox"/>
Terrorism and Terrorism Financing		<input checked="" type="checkbox"/>	Extortion for Business		<input checked="" type="checkbox"/>	Piracy		<input checked="" type="checkbox"/>
Geography (Porous Borders Afghanistan & Iran)		<input checked="" type="checkbox"/>	Cyber crime		<input checked="" type="checkbox"/>			
Delivery Channels (Branchless Banking, Wires Transfers, Microfinance Bank)		<input checked="" type="checkbox"/>	Insider Trading and market Manipulation		<input checked="" type="checkbox"/>			
			Delivery Channels (Non-Banking Financial Companies & Modarabas)		<input checked="" type="checkbox"/>			

If answered 'YES' to Question no. 06 and accordingly selected any of the options above then please share the below details:-

Dealing Court/ Agency: N/A Nature: N/A Title: N/A
 Year: N/A City: N/A
 Few Details about the case:-

Final Report D-dimer

Visit Date: 05 Nov, 2023

Reported: 05 Nov, 2023 | 01:26 am

Test	Result	Unit	Reference Values
D-Dimer	2207	ng / ml	0 - 198

Interpretation

D-Dimer is a marker for DIC, deep vein thrombosis and pulmonary embolism.

For diagnosis D-Dimer result should be used in conjunction with other clinical data including signs/symptoms.

If D-Dimer results are inconsistent with clinical evidence, additional testing is suggested to confirm the result.

Autoimmune antibodies, rheumatoid factor, heterophil (anti-animal) antibodies, plasma proteins, hemolysis, cross-reacting substances, drugs and metabolites can interfere with assay and may give false-positive results.

Report Initialized By: Lal Badsh

Final Report Plasma Fibrinogen Level

Visit Date: 05 Nov, 2023

Reported: 05 Nov, 2023 | 09:18 am

Test	Result	Unit	Reference Values
Plasma Fibrinogen Level	313	mg / dl	200 - 400

Interpretation

Increased levels are seen in diabetes, inflammatory syndromes and obesity. Decreased levels are observed in DIC or fibrinogenolysis. Test performed by clotting method of Clauss on Sigma coagulation analyser.
