

Subject Reply of explanation

Respected sir

With due respect it is sated that there was a campaign from 11th-Jan 2021 to 15th –Jan-2021.

I am the UCPO of UC DDM and the total target of that UC is 313 and we have required 18 vials.

After end of campaign only two vials have miss readable labels which are wet from the polio team on the day 5 (catch day 2nd). And we have reported them on day 5 evening.

End of the round tOPV Distribution and Utilization Report and given below. (From A)

Regard

Tehsin Ullah UCPO DDM

Instructions to report on utilization of TOPV vials at the end of each SIA round

Vaccine:

- TOPV is a vaccine used exclusively to respond to an outbreak of type 2 vaccine derived poliovirus (VDPV2). It should not be used in routine immunization.
- Type 2 poliovirus is an eradicated pathogen and so it is critical to have very precise counts of TOPV vaccine vials at each level of the health infrastructure.
- Once all SIA rounds are completed, all unopened vials must be returned to the national vaccine store and no TOPV vial should remain at any level of the health infrastructure.

Stock reporting:

- Form A should be used to report on TOPV stock levels from all administrative areas conducting TOPV SIAs.
- Vaccine quantities should be recorded as vials rather than doses.
- The vaccine cold chain responsible should fill the form to be reviewed by the immunization programme manager.
- The immunization officer responsible at the facility level should report to the district level within 2 days following completion of each SIA round.
- The immunization officer responsible at the district/regional level should retrieve all TOPV vials (opened and unopened) within 5 days following the completion of each SIA round and report to the upper level within 7 days.
- All unopened vials at the end of each round should be physically counted and their VVM status checked.
